

DATA4NATURE

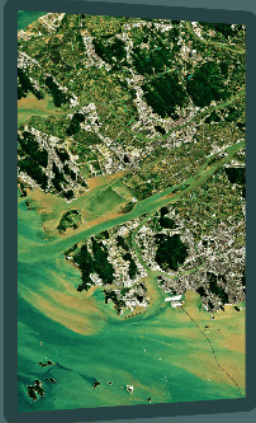

NATURE ASSET REPORTS

Understand nature where it matters.

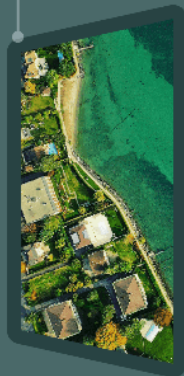

See what nature is present across your area of interest, what condition it's in, how it's changing and what it means for the activities connected to it.

FROM LANDSCAPE TO REPORT

01
LANDSCAPE
The big picture.

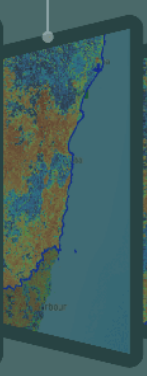

02
AREA OF INTEREST
Zooming in.

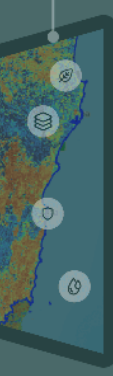

03
ECOSYSTEM
Whats there?

04
CONDITION
What state is it in?

05
SERVICES
What does it support?

REPORT TYPES

TNFD

A location-based nature assessment built around TNFD LEAP. Understand nature-related dependencies, impacts, risks and opportunities across your area of interest, with the spatial evidence needed to support TNFD-aligned disclosure.

Extent Report

Understand which ecosystems are present, how much of each there is and how their extent has changed over time.

Condition Report

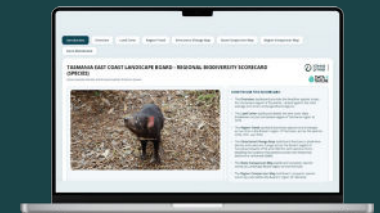

Assess ecosystem condition against reference benchmarks to identify what is degrading, improving or holding.

Ecosystem Services Report

Understand the ecosystem services supporting your asset and operations, such as pollination, water regulation and flood buffering, and their economic significance.

PUT YOUR LANDSCAPE IN CONTEXT

Compare your location and nature management with those in the surrounding landscape.

WHAT IS DATA4NATURE?

Nature data is everywhere.
Now you can see the whole picture.

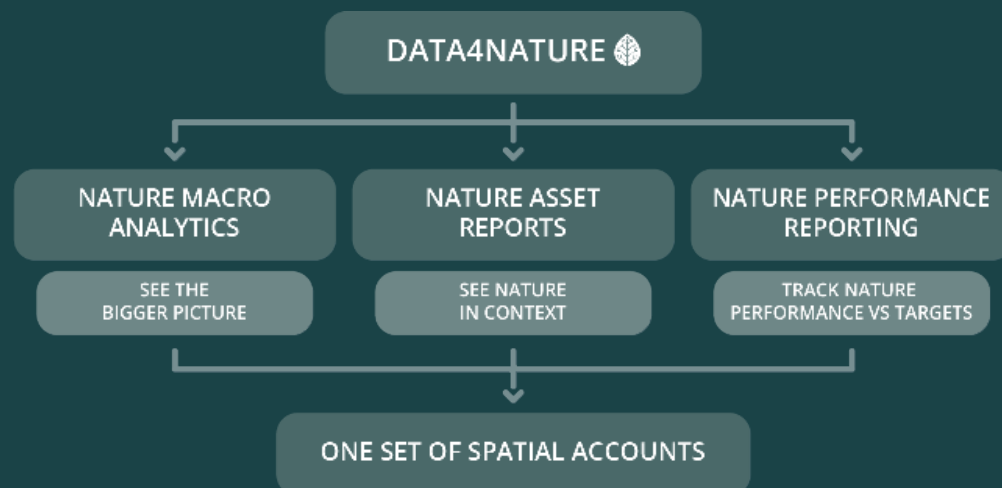

Most nature data sits scattered across teams and spreadsheets and none of it lines up. D4N gives your nature data a consistent, recognised foundation.

It's a spatial analytics platform that shows how much nature you have, what condition it's in and the economic value it supports, with no GIS skills or specialist licences required.

Built on the UN's System of Environmental-Economic Accounting (SEEA), the international framework for connecting environmental and economic information.

THREE PRODUCTS, ONE PLATFORM.

All three products draw on the same underlying spatial accounts, so evidence scales from a single site right up to a full regional picture.

WHO IS IDEEA GROUP?

Nature built our economy.
We make it count.

IDEA Group combines economics, environmental science and spatial analysis to help governments, businesses and investors understand nature's role in the economy.

We develop practical approaches to measuring, valuing and managing nature and climate, grounded in the UN SEEA framework for nature.

See what your nature data can tell you.
